

Founder Signal — Business Requirements Document

Version 1.0 • August 2026

Founder Signal is a public website of business opportunities discovered automatically once per day. Users browse published opportunities; they do not trigger research. Raw source data is transient.

1. Product Vision

Become the daily opportunity radar for founders: show which problems are gaining demand, how strong the evidence is, what competition exists and what a practical MVP could look like.

2. MVP Scope

Capability	MVP	Later
Daily discovery	3–4 source families	30+ sources
Signal aggregation	Counts, intent, momentum	Deep evidence graph
Scoring	5 deterministic dimensions	Predictive scoring
AI	Top 10–20 opportunities	Deep research
Competition	Basic discovery/pricing	Revenue verification
Website	Home + detail + trends	Personalization/alerts

3. Requirements

- Daily batch completes predictably.
- Permanent storage contains aggregated intelligence, not raw internet content.
- Most signal processing occurs without an LLM.
- Source failures do not stop the whole run.
- Metrics have internal provenance metadata.
- Operating cost remains bootstrapped-friendly.

4. Success Metrics

- 10–20 quality opportunities published daily.
- >20% opportunity-detail engagement.
- >20% weekly returning visitors.
- >10% active-user saves.
- <1–5% of raw signals reach LLM processing.
- Zero permanent raw-content retention.

5. Roadmap

MVP: lightweight daily discovery. Phase 2: broader sources and stronger competition/revenue intelligence. Phase 3: deep validation, personalization and alerts. Phase 4: opportunity graph and founder copilot.
